Snow Leopard Trust's Natural Partnerships Program connects zoos around the world with the unique opportunity to protect endangered snow leopards.

Through the program, zoos get directly involved and make powerful contributions to the highest priority in-situ conservation and research programs in snow leopard range countries such as Mongolia, China, India, Pakistan and Russia.

TULSA ZOO'S FOCUS: LONG-TERM ECOLOGICAL STUDY

- Building community partnerships
- Using sound science (motion sensor cameras, GPS radio-collaring and socioeconomic survey)
- Determining priorities for protecting the endangered snow leopard and reducing its threats
- Developing and maintaining community-based conservation for local animal herders
- Conducting research year round
- Providing an unprecedented amount of data on snow leopard movement and habitat use

SEE IT. SAVE IT.

Since 1982, Tulsa Zoo has been privileged to house snow leopards. These animal ambassadors help connect our guests to their wild counterparts and inspire the next generation to conserve wildlife and wild places for the future.
