The Tulsa Zoo supports the Tiger Conservation Campaign and anti-poaching efforts through the Tiger Species Survival Plan (SSP) and the Wildlife Conservation Network (WCN). The campaign's purpose is to raise awareness about wild tigers and focus conservation efforts in areas of the world where wild tigers are found. Endau-Rompin, Malaysia is one of the last remaining areas where Malayan tigers are found. There is immense pressure on the species' survival due to illegal poaching.

TULSA ZOO'S FOCUS: TIGER CONSERVATION CAMPAIGN AND ANTI-POACHING

- The Tulsa Zoo participates in catalyzing and supporting on-the-ground rangers patrolling across the Endau-Rompin landscape by equipping robust ranger patrol teams with the ability to check on hunting infringements, seize guns and dismantle illegal snares. We support the deployment of movable roadblocks and static checkpoints as further means of deterring the high number of relatively less-committed, minor poachers and capturing a smaller number of more-committed, high-value poachers. Most importantly, we help strengthen the laws that impact poaching in Endau-Rompin as much as possible. In a recent survey conducted by wildlife biologists, data shows that there are far fewer tigers than hoped for within three known Malayan tiger habitats. Tulsa Zoo is proud to be the only AZA zoo in the world with two breeding pairs of Malayan tigers. To date, there have been six Malayan tiger cubs born through our participation in the SSP.
